

Growfit Sports Academy NPC

Grassroots football · U11 · U13 · U15 · Greater Durban, KwaZulu-Natal

FUNDING PROPOSAL · OCTOBER 2026

Growfit Match Video & Analysis Programme

A Veo AI camera for a Durban grassroots academy. Every Growfit match is filmed and used to coach players. The service is shared with partner clubs, and a small service income is built to cover the running costs after Year 1.

R83,500

Total funding requested: equipment plus the first 12 months of running costs

~70

Matches filmed per season across three age groups

94%

Share of Year-2 running costs covered by service income (base case)

Organisation

Growfit Sports Academy NPC (est. 2023)
NPC Reg. No. [] · PBO No. []
Member club, Greater Durban Football League (GDFL)

1 Executive summary

Professional academies use match video every week to show players what they did and how to do it better. Grassroots players in Greater Durban almost never see themselves play. At about R80,000 for the first year, an AI camera system is out of reach for a volunteer-run club, so most clubs in the GDFL have no video at all.

Growfit Sports Academy is a non-profit academy running U11, U13 and U15 squads, now in its third year. We are asking for **R83,500** to buy a **Veo Cam 3** system and fund its first year of software. The camera films a whole match on its own from a tripod. It needs no operator, and the AI produces the broadcast-style video, highlights and match statistics within hours.

R83,500

Funding ask (budget at the conservative end, pending local quote)

R35,600

Once-off equipment, import & setup

R47,900

Year-1 software, insurance, data & contingency

R41,300

Base-case net service income, Year 1

What the funding achieves

- **Player development:** every Growfit match is filmed and reviewed by coaches. Short clips are used at Wednesday and Friday training, so 60-odd players learn from their own games.
- **Visibility for talent:** players whose parents have given media consent get highlight reels, which can support high-school sport scholarships and trials.
- **Raising the level of the league:** opposition clubs can buy the recording of their own match, giving other Durban clubs access to video for the first time.
- **Sustainability:** a priced service (match footage, parent highlight packages, tournament filming and a local sponsor) is projected to cover **94% of Year-2 running costs in the base case**, and more than all of them in the strong case.

How this differs from the earlier draft. This version prices the hardware and software from Veo's 2026 list prices instead of estimates. It budgets for Veo Analytics, which the parent highlight service depends on, and for insurance, data, import VAT and a contingency. The revenue streams are made POPIA-compliant: children's footage is only shared with consent, and only with the club responsible for those children. The return is presented as a path to self-sustaining operation, not as a short-term profit.

A lower-cost **Option C at R29,700**, using an XbotGo Falcon camera with no subscription, is set out in Section 9.

2 About Growfit Sports Academy

Growfit Sports Academy is a registered Non-Profit Company founded in 2023 in Greater Durban. It runs three competitive age groups (U11, U13 and U15) in the Greater Durban Football League. Teams train on Wednesdays and Fridays and play on Sundays.

Leadership

Buhle Madlala	Founder, Academy & Technical Director, Finance; primary U13 coach
Sphe Mlotshwa	U11 Head Coach; Admin & Equipment Manager
Khaya Madlala	U15 Head Coach; Fundraising & Registration

Open seats being recruited: Safeguarding Officer, Programmes & Camps Coordinator, Logistics Coordinator.

Governance already in place

- 8 adopted policies, including Child Protection & Safeguarding (Children's Act 38 of 2005), Discipline, Injury & Medical, Attendance and Social Media
- 6-document registration pack per player per season, including **POPIA and photo/media consent**
- SAFA / GDFL registration for every player; CPR Part B checks for coaches

A digital academy: the Growfit FA platform

Growfit runs its operations on its own web platform, **Growfit FA**. It covers registration and document tracking, attendance (with a welfare check-in when a player drops below 75%), player development passports, fixtures and ratings, a tactics studio, and parent access limited to their own child. Consent is recorded per player, and the platform already blocks photos when consent is missing. The video programme connects to this system (Section 5), so footage is managed under the same consent and safeguarding controls as the rest of the player data.

3 The need

For players

Players learn faster when they see what happened. Right now, feedback after a game depends on what a coach remembers from the touchline. Video turns "keep your shape" into a clip the player can watch.

For families

High-school sports programmes and scouts increasingly ask for footage. Families in our community can't pay for private filming, so talented players stay unseen.

For the league

Most GDFL clubs are volunteer-run and have no video. A shared camera service lets the clubs we play against use their own match footage for coaching.

The barrier

The barrier is money, not interest. The hardware and first-year software for an AI camera cost about R80,000, and the subscription renews every year. One-off funding plus a service income solves both parts of the problem.

4 The solution: Veo Cam 3

Veo is the most widely used AI camera in youth football. Leagues such as MLS NEXT, US Youth Soccer and US Club Soccer have adopted it as their video partner. The camera is put up on a tall tripod at the halfway line, records the whole pitch, and uploads the footage after the match. Veo's AI then produces the edited video and the data.

COMPONENT	WHAT IT DOES FOR GROWFIT
Veo Cam 3	Two 4K sensors record the full pitch in panorama. AI produces a 1080p "follow-cam" view that tracks the ball. Up to 6.5 hours of battery, enough for three back-to-back age-group games. Weighs 1.25 kg and uploads over Wi-Fi or a phone hotspot. No camera operator needed.
Veo Editor (in the subscription)	Shots and goals are clipped automatically. Coaches add their own clips, tags and comments, and draw on the video (arrows, shapes, spotlight). An interactive view lets them pan and zoom around the full pitch for 90 days after the match. Clips download as MP4 or share by link, and viewers don't need a Veo account.
Veo Analytics (add-on)	AI-generated match statistics: possession, passes, shots, a 2D tactical view, heatmaps, shot and pass maps and a momentum graph. Per-player physical data covers distance, sprints and top speed. Player Moments reads shirt numbers to build an individual highlight reel for each player automatically. Coach Assist is an AI chat that answers questions about the team's match data.
Share with Opponent	Veo's built-in feature for giving the opposing club its own copy of the recording, without our internal notes. Access can be withdrawn at any time. This is the delivery channel for the club footage service.
League Exchange (future)	A shared video library for a whole league. It is a natural next step to propose to the GDFL once the service is established.
Veo Live (not in budget)	Live-streaming with score and sponsor overlays. Deliberately left out of Year 1 and only to be considered if a sponsor funds it.

How the camera is used in a normal week

SUNDAY Record Camera set up at kick-off and left to run for the age-group matches at the venue.	SUN NIGHT Upload Upload over home Wi-Fi; Veo AI processes the video, highlights and stats.	MONDAY Review Coaches tag key moments and note 3 coaching points per squad.	WED · FRI Coach 5–10 minute clip reviews at training, then drills that work on what the clips showed.	MON-TUE Share Opposition clubs and consented parents receive their footage and reels.
---	--	---	---	---

Why Veo, and not a cheaper camera

We compared Veo with other systems. Pixellot is built for venues and leagues and costs more. Trace is leased rather than owned. XbotGo Falcon costs about R21,000 locally with no subscription, but it is a pan-and-zoom camera with no automatic match statistics and no per-player reels. It is set out as a lower-cost Option C in Section 9. Veo's automatic Player Moments reels and match statistics drive two of the four income streams. Its built-in opponent sharing is what makes the club service practical for volunteers to run.

5 Integration with the Growfit FA platform

Vevo produces the video and data. Growfit FA links that output to each player's development record and enforces consent. Vevo does not offer a public data API, so the integration uses links and coach confirmation and does not depend on a technical connection.

PLATFORM FEATURE	WHAT IT DOES	STATUS
Consent gate	No clip or reel is attached to a player, or shared with their parent, unless photo/media consent is on file for that player.	CONSENT CHECK EXISTS
Match video on fixtures	Each fixture holds the link to its Vevo recording ("Watch the match"), visible to that squad's players and parents.	PLANNED
Clips on the player passport	Coaches attach Vevo clip links with timestamps to a player's development passport. They sit next to ratings and milestones, so progress is visible over a season.	DATA MODEL EXISTS
Match Film breakdowns	Coaches load a downloaded Vevo clip into the platform's tactics studio, freeze a frame, draw on it and share the breakdown with the squad.	LIVE TODAY
Match event log	Scorers, assists, minutes played, cards and substitutions recorded per player, confirmed against the video. This feeds fair game-time planning and parent reports.	PLANNED
Vevo stats import + AI match report	A coach uploads a screenshot of Vevo's match statistics. The platform's AI reads it into structured data for the coach to confirm. It then feeds Growfit's existing AI match report and opponent analysis.	PLANNED
Footage service log	An admin list of footage orders: which club, which match, signed sharing agreement, paid or unpaid. Payment itself stays off-platform (EFT / SnapScan).	PLANNED

Platform development is done by Growfit volunteers and is **not** part of this funding request.

6 Budget

Prices are 2026 US-dollar list prices published by Veo and its resellers, converted at **R16.40/US\$** (late-September 2026 rate). Subscriptions are billed annually in advance. The **Club** plan is used because Growfit runs three age groups and needs player and parent seats beyond the Team plan's limit. All figures will be replaced by a formal quote from Veo's authorised South African reseller (MilkaSports). Any saving reduces the amount requested.

ITEM	BASIS	ZAR
Once-off: equipment & setup		
Veo Cam 3 camera	US\$1,299	21,300
Veo 5.2 m carbon-fibre tripod	US\$379	6,200
Import VAT	15% on hardware	4,100
Shipping, clearance & delivery to Durban	Estimate	1,500
Accessories	Hard case, power bank, rain cover, tripod lock & cable	2,500
Subtotal once-off		35,600
Year 1: running costs		
Veo Club subscription (12 months)	US\$1,749 / year	28,700
Veo Analytics add-on (12 months)	US\$59 / month on Club	11,600
Portable-equipment insurance	All-risk, estimate	1,200
Mobile data for uploads	Backup to home Wi-Fi	2,400
Contingency	5% (exchange rate, quote variance)	4,000
Subtotal Year 1 running		47,900
Total funding requested (Full package)		R83,500

Essential package: R71,300. The same budget without the Analytics add-on, with contingency recalculated. Coaches still get the full video, automatic shot and goal clips, drawing tools and opponent sharing. Automatic per-player reels and advanced statistics are lost, so parent reels would have to be made by hand. Analytics can be added later from service income.

7 Service & income model

The service exists to keep the camera running. Prices are set for grassroots clubs and families, and every income stream follows the consent rules in Section 10.

STREAM	OFFER	PRICE	WHO IT'S FOR / SAFEGUARD
1. Club match footage	Full recording of a match, delivered through Veo's Share with Opponent or as an MP4 download. <i>Plus</i> : one-page match summary (shots, key moments).	R350 R650 Plus	The opposition club only, after signing a footage-sharing agreement confirming it holds its own players' media consent.
2. Player highlight packages	Term package of AI-generated Player Moments reels (3+ matches), or an edited season "showcase reel" for trials and school applications.	R400 / term R1,000 / season	Growfit players only, and only where media consent is on file.
3. Filming service	Camera and volunteer operator for school matches, friendlies and holiday tournaments.	R900 / match R2,500 / day	The organising club or school, which is responsible for consent at its event.
4. Community sponsor	"Growfit Match Cam, supported by [Sponsor]": logo on highlight reels, social posts and the tripod banner.	R6,000+ / year	Local business. The sponsor's branding never appears next to an individual child's name.

Key assumptions

ASSUMPTION	CONSERVATIVE	BASE	STRONG
Active match months per year	9	9	9
Growfit matches filmed per month (one camera, three squads)	6	8	9
Opposition clubs that buy footage	20%	30%	45%
Average footage price	R400	R450	R500
Families buying a term package (of ~60 players)	6	9	14
Season showcase reels sold	3	5	8
External filming jobs per month / tournament days per year	0.5 / 1	1 / 2	1.5 / 3
Sponsorship per year	R0	R6,000	R12,000

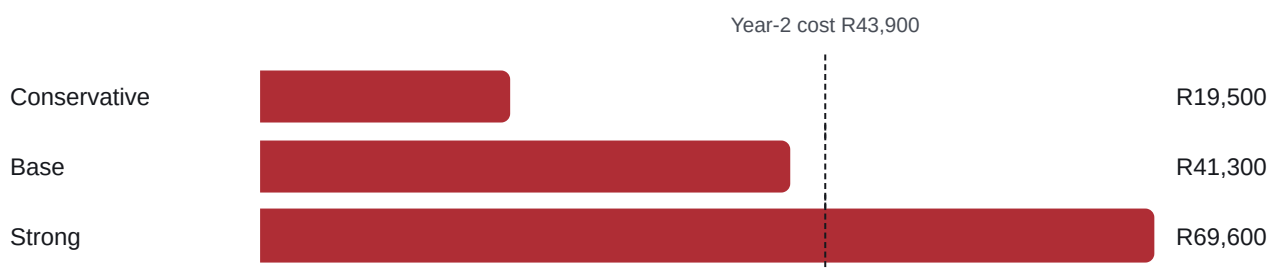

Player numbers and fixture counts are planning assumptions and will be confirmed against the 2027 GDFL fixture list and registrations.

8 Financial projections

Year 1 equipment and running costs are covered by this grant, so all Year 1 service income goes into a reserve for the **Year 2 renewal**. That renewal costs R43,900: the Club plan, Analytics, insurance and data. The test of the model is how much of that renewal the service income covers.

ANNUAL FIGURES (ZAR)	CONSERVATIVE	BASE	STRONG
1. Club match footage	4,300	9,700	18,200
2. Player highlight packages	10,200	15,800	24,800
3. Filming service	6,600	13,100	19,700
4. Community sponsor	0	6,000	12,000
Gross service income	21,100	44,600	74,700
Less payment fees (3%)	(600)	(1,300)	(2,200)
Less operator stipends (external jobs)	(1,000)	(2,000)	(2,900)
Net service income	19,500	41,300	69,600
Year-2 running cost (Full)	43,900	43,900	43,900
Share of Year-2 running cost covered	44%	94%	159%

Net service income vs. Year-2 running cost

Bars: net service income in Year 1 (ZAR). Dashed line: cost of renewing the full system for Year 2.

If income falls short

- **Drop to the Essential setup in Year 2.** Removing Analytics cuts the renewal to R32,300, which the base case covers at 128%.
- **Grow sponsorship.** A single R12,000 sponsor moves the conservative case from 44% to 71%.
- **Propose a league partnership.** Offer the GDFL a filming and League Exchange arrangement funded by participating clubs.

Growfit's NPC status: service income is used only for the programme. Tax treatment of trading income (including the partial exemption for public benefit organisations) will be confirmed with our accountant before the service launches.

9 Lower-cost alternative: XbotGo Falcon

If the full amount can't be raised, the programme can start with an **XbotGo Falcon**. It is an AI camera bought once, with **no subscription**, and is sold locally by a South African retailer. Most of the coaching benefit is kept. What is lost is Veo's automatic statistics, per-player reels and built-in opponent sharing.

	VEO CAM 3 (OPTIONS A & B)	XBOTGO FALCON (OPTION C)
How it films	Fixed panoramic camera records the whole pitch; AI cuts a ball-following view	Robotic pan-and-zoom camera: one lens tracks play, a second records it in 4K (30 fps)
Re-watching off-ball play	Yes. The full pitch can be panned and zoomed for 90 days	No. Only what the camera pointed at is recorded
Automatic highlights	Shots and goals, plus per-player reels from shirt numbers (Analytics)	Goals and key moments; no per-player reels
Match statistics	Possession, passes, shots, heatmaps, distance and sprints (Analytics)	None
Sharing with opponents	Built in (Share with Opponent)	Manual: MP4 by private download link
Streaming · battery	Live streaming is a paid add-on · up to 6.5 h	Live streaming included · about 4 h · IPX5 splash-resistant
Known limits	Annual subscription required to use the footage	Reviewers report it stays zoomed out too wide on full-size 11-a-side pitches, with no manual override. Footage stays on a memory card, so the academy must store and share the files
Cost	R83,500 (Full) / R71,300 (Essential) in Year 1; R32,300–R43,900 every year after	R29,700 in Year 1; about R4,800 every year after

Option C budget

ITEM	ZAR
XbotGo Falcon Elite Pack (camera, 4 m tripod, case), local retail	21,000
Accessories: 512 GB memory card, power bank, rain cover, lock	2,500
Cloud storage for sharing footage (12 months)	2,400
Portable-equipment insurance	1,200
Mobile data	1,200
Contingency (5%)	1,400
Option C total	R29,700

What changes in the service

- **Club footage:** full-match MP4 only, priced at **R300**.
- **Player highlights:** edited by hand, so fewer are offered: **R300 / term** and **R800** for a season reel.
- **Filming service:** unchanged. Live streaming of school and tournament events is possible, with the organiser responsible for consent.
- **Base case:** about **R30,200** net service income a year, roughly six times the running cost.

Upgrade path. Option C covers its own running costs easily, and the surplus goes into a reserve. Once demand is proven, that reserve can fund a move to Veo in Year 2 or 3. The XbotGo then stays on as a second camera for matches that clash at different venues, which one camera alone can't cover.

10 Child protection, POPIA & consent

Every player we film is a child. Under POPIA (sections 34–35), children's personal information, including identifiable video, may only be processed with the consent of a parent or guardian, or under a narrow legal exception. The programme is built around that rule.

RULE	HOW IT IS APPLIED
Consent before footage is used	Growfit's registration pack already includes POPIA and photo/media consent. Clips and reels are only created and shared for players with consent on file, and the Growfit FA platform enforces this.
Opposition players	Opposition footage goes only to the opposition club, for its own players. The club signs a short <i>Footage Sharing Agreement</i> confirming it holds media consent and will not publish the footage. We do not sell individual reels of opposition players.
League & venue notice	The GDFL is informed before launch. Pre-match notice to the opponent and a sign at the venue that filming is taking place. A match is not filmed if the league or the opposition objects.
Private by default	Recordings are set to Restricted in Veo, not Public. Nothing is published on social media without consent, and children are never identified by full name with their video.
Retention & deletion	Recordings are kept for up to 12 months (Veo plan storage), then deleted unless needed for safeguarding. Parents can ask for their child's clips to be removed, and a removal also withdraws copies shared with other clubs.
Safeguarding	Camera handled only by vetted adults (CPR Part B checked). Recording is only of matches and training, never in changing rooms. The incoming Safeguarding Officer will be the named lead for video.
Information Officer	The Academy Director serves as Information Officer and will be registered with the Information Regulator before launch. Cross-border storage happens on Veo's cloud under its data-processing terms, and this is disclosed in the consent form.

11 Risks & mitigation

RISK	MITIGATION
Theft or damage	Camera always stays with a named adult and goes in a locked case between games. Tripod is tethered and weighted, and portable-equipment insurance is included in the budget. An asset register is held by the Equipment Manager.
Exchange rate / price rises	Local quote obtained before purchase. Subscription paid annually in advance, which fixes the Year 1 cost. A 5% contingency is included.
Low uptake by clubs or parents	The programme's main value is coaching our own players, which doesn't depend on sales. The Essential fallback and sponsorship close any gap (Section 8), and Option C (Section 9) is a lower-cost route.
Volunteer capacity	The camera runs itself, so setup takes about 10 minutes. Sales and delivery happen inside Veo with no file handling. External filming jobs pay a stipend to a trained parent or youth volunteer.
Upload / connectivity	Upload over home Wi-Fi on Sunday night, with mobile data as backup. Footage is stored on the camera until the upload is confirmed.
Clashing fixtures	One camera can't cover games at two venues. Priority rotates fairly between age groups, published per term.

12 Implementation plan

WHEN	MILESTONE
Month 0	Funding agreed. Formal quote from the SA reseller. Information Officer registration confirmed. Footage Sharing Agreement and updated consent wording finalised.
Month 1	Equipment purchased and insured. Coach training on recording, Editor and Analytics. GDFL informed. Consent refreshed for all registered players.
Months 1–2	Internal pilot: all Growfit matches filmed and used in training. No sales during the pilot.
Month 3	Club footage service and parent highlight packages launched. Sponsor approached.
School holidays	Tournament filming offered to schools and organisers.
Month 9	Review against KPIs. Year-2 decision: Full or Essential renewal from reserve. League Exchange proposal to the GDFL.

13 What we will report

Growfit will send the funder a short report each quarter, with an annual summary.

≥ 80%

of Growfit league matches filmed

≥ 2

video review sessions per squad per month

100%

of shared footage covered by consent or a signed agreement

≥ R41k

net service income in Year 1 (base case)

We will also report qualitatively: players who moved to higher-level teams, school sports programmes or trials using their reels, and feedback from coaches, parents and partner clubs.

14 The request

Growfit Sports Academy NPC requests **R83,500** (Option A: Veo Full), **R71,300** (Option B: Veo Essential) or **R29,700** (Option C: XbotGo Falcon) as a **grant or sponsorship** to establish the Growfit Match Video & Analysis Programme. Growfit is a non-profit company with no shareholders, so it cannot offer equity. An interest-free loan repayable from service income from Year 2 can be discussed. The funder will be credited on all programme material unless they ask otherwise.

Calculation notes

- USD converted at R16.40 and rounded to the nearest R100. Import VAT is 15% of the converted hardware value.
- Club footage income = matches filmed per month × purchase rate × average price × 9 months.
- Highlight income = term packages × R400 × 3 terms + season reels × R1,000.
- Filming income = jobs per month × R900 × 9 months + tournament days × R2,500. Stipends are R150 per job and R300 per tournament day.
- Option C (XbotGo): pricing from the South African retailer listing (R15,400–R21,000 depending on pack). Club footage 8 × 25% × R300 × 9 months; highlights 6 × R300 × 3 terms + 4 × R800; filming as in Section 8; less 3% fees and stipends; net about R30,200.
- Year-2 running cost = Club plan R28,700 + Analytics R11,600 + insurance R1,200 + data R2,400 = R43,900 (Essential: R32,300).
